

How Mentos reacts with Coke.

Mixing Coke and Mentos is an awesome science experiment. It teaches us about reactions.

When you push the Mentos into the Coke, fizzing starts instantly inside the bottle. White frothy foam appears inside the bottle and creates gas. This gas makes the Coke rise and shoot up high in the sky. In the blink of an eye, the Coke then falls down and hits the ground. After what is about two seconds, the fountain goes down and completely stops flowing. This is the end of the reaction.
