Tooth and Coke Experiment!

By Jaslyn Clayton
2M
This experiment shows what happens to your tooth if you drink too much coke! We kept my sisters tooth that she lost and put it in a glass of coke! Keep watching to see what it looks like after a couple of days!
Before The Tooth Was Put in the Coke
The First Hour

The Next Afternoon  2 hours later
After a couple of days
BEFORE

AFTER
See what Coke does to your teeth!
Now I hope you have learnt that drinking a lot of coke really damages your teeth!
The Procedure for the Coke Experiment!
What you will need:

- a glass or cup
- a real tooth that has fallen out
- a bottle or can of coke
- a camera if you would like to take photos of the tooth and the differences like me
Steps

1. Put your tooth into the glass/cup.
2. Pour the coke into the cup making sure the tooth is covered.
3. Leave the tooth in the glass/cup for a couple of hours.
4. Check on the tooth and see how different it looks (take photos if you would like).
5. Keep repeating step 4 for as long as you wish.
THANKS FOR WATCHING
